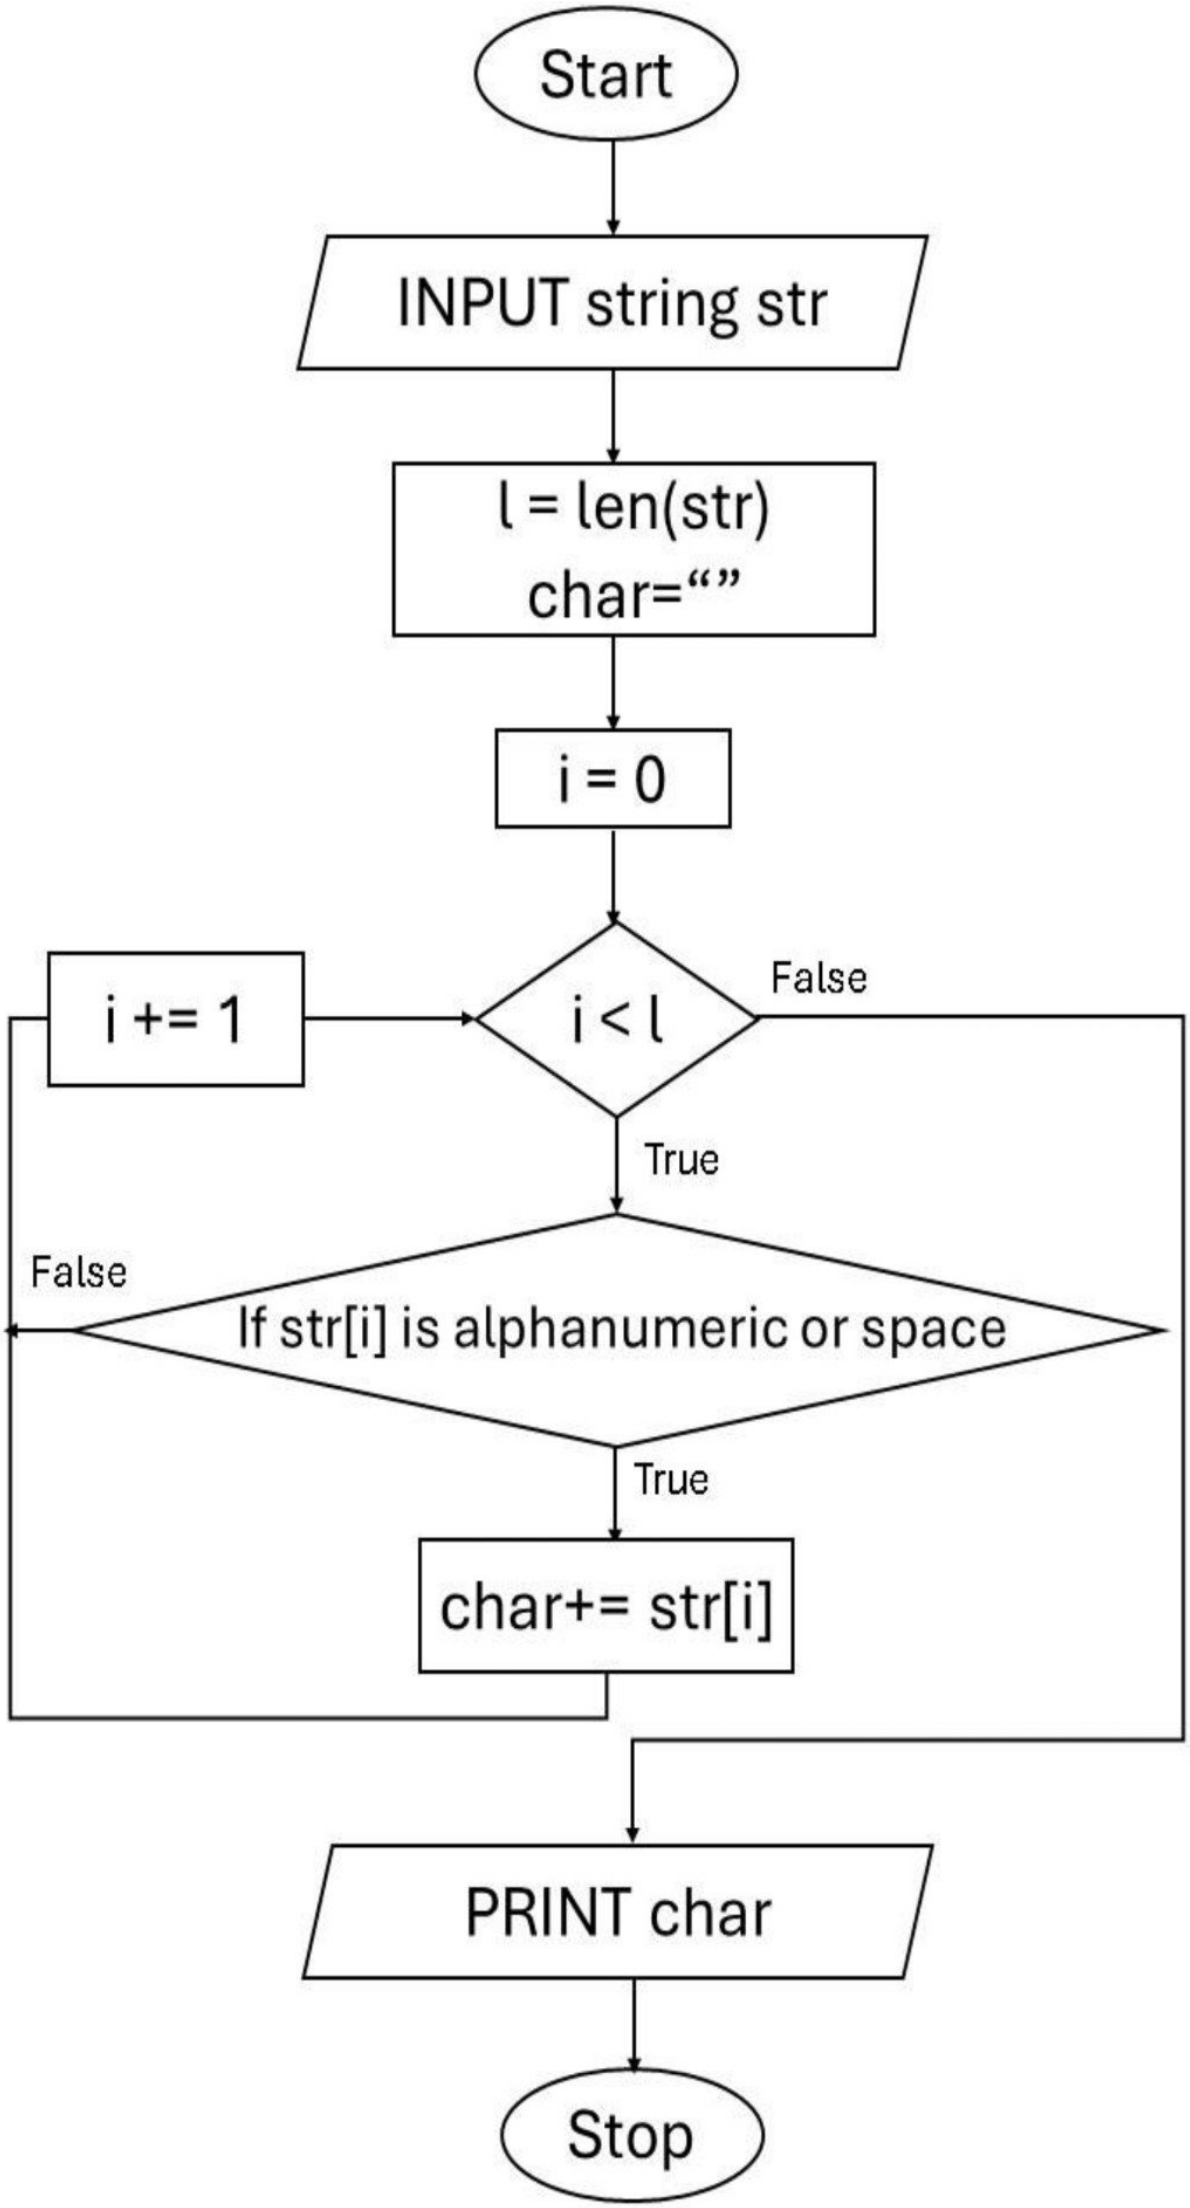
Experiment 10

10.1.1 Remove Punctuations from a String

Algorithm :

Step 1 : Start
Step 2 : Input string str
Step 3 : Set char as an empty string
Step 4 : Find length of string and store in l
Step 5 : Set i = 0
Step 6 : Repeat steps while i is less than l
Step 7 : Check if the character is a letter or digit or a space
Step 8 : If yes, add the character to char
Step 9 : Increase i by 1
Step 10 : Go back to Step 6
Step 11 : Print char
Step 12 : Stop

Flowchart :



Start
INPUT string str
l = len(str)
char=“”
i = 0
i += 1
i < l
False
True
False
If str[i] is alphanumeric or space
True
char+= str[i]
PRINT char
Stop

Code :

```
str=""
st=input()
for i in st:
    if i.isalnum() or i.isspace():
        str=str+i
print(str)
```

10.1.1. Remove Punctuations from a String

00:49

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

removeP...

SUBMIT

```
# Type Content here...
str=""
st=input()
for i in st:
    if i.isalnum() or i.isspace():
        str=str+i
print(str)
```

Debugger

Average time 0.010 s 9.88 ms

Maximum time 0.017 s 17.00 ms

4 out of 4 shown test case(s) passed

4 out of 4 hidden test case(s) passed

Test case 1 15 ms DEBUG

Expected output

Hello, World!

Hello World

Actual output

Hello, World!

Hello World
